

Applicant : Robert J. Chansler
Serial No. : 09/467,310
Filed : December 17, 1999
Page : 2 of 8

Attorney's Docket No.: 07844-280001 / P254

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently amended) A method of defining a user interface for a computer program, comprising:
after execution of the computer program has begun, defining a user interface of the program by:
reading a function description of a first function to be provided by the user interface, the function description including logic for selecting an appearance of the user interface, the function description comprising instructions for handling user interface events;
executing the logic included in the function description to select an appearance description of a first appearance to be presented by the user interface;
associating the function description and the appearance description on the fly at run time into an executable form; and
executing the executable form of the user interface to generate the user interface with the associated function description and appearance description.
2. (Currently Amended) The method of claim 1, further comprising replacing the function description during program execution while providing a continuity of presentation.
3. (Currently Amended) The method of claim 1, further comprising replacing the appearance description during program execution to present logic of the user interface with a different appearance.

Attorney's Docket No.: 07844-280001 / P254

4. (Previously Presented) The method of claim 1, further comprising:
reading a map defining multiple functions to be provided by the user interface including the first function;
reading a fashion defining all appearances to be presented by the user interface including the first appearance;
associating the map and the fashion on the fly at run time; and
executing the user interface with the associated map and fashion.
5. (Previously Presented) The method of claim 4, further comprising replacing the map during program execution.
6. (Previously Presented) The method of claim 4, further comprising replacing the fashion during program execution.
7. (Previously Presented) The method of claim 4, wherein the map specifies that a subordinate part of the user interface is specified by a second map-fashion pair.
8. (Previously Presented) The method of claim 4, further comprising receiving events from one of the map and the fashion.
9. (Original) The method of claim 8, further comprising executing business logic associated with the respective component.
10. (Canceled)
11. (Currently Amended) A method of defining a user interface for a computer program, comprising:
selecting at least one of a map component and a fashion component according to an environment variable on the fly at run time;

Attorney's Docket No.: 07844-280001 / P254

associating the [[a]] map component and the [[a]] fashion component ~~on the fly at run time~~ to generate the user interface, the map component including logic for changing one of the map component and the fashion component, the map component including instructions for handling and processing interface objects and events;
combining the map component and the fashion component into an executable form; and
executing the user interface with the associated map component and fashion component.

12. (Original) The method of claim 11, further comprising loading a resource bundle associated with the map component.

13. (Original) The method of claim 12, further comprising locating sub-components of the user interface.

14. (Original) The method of claim 12, further comprising instantiating one or more sub-components of the user interface.

15. (Original) The method of claim 12, further comprising calling the fashion component to allocate a resource to each sub-component.

16. (Original) The method of claim 15, further comprising instructing each sub-component to present itself in the user-interface.

17. (Original) The method of claim 11, further comprising receiving events from the map component.

18. (Original) The method of claim 11, further comprising receiving events from the fashion component.

19. (Original) The method of claim 11, further comprising executing business logic associated with the map component.

Attorney's Docket No.: 07844-280001 / P254

20. (Previously Presented) The method of claim 11, wherein the map and fashion components are stored in a database.

21. (Previously Presented) Computer-readable medium to define a user interface for a computer program after execution of the computer program has begun, comprising instructions to:

- read a function description of a first function to be provided by the user interface, the function description including logic for selecting an appearance of the user interface;
- execute the logic included in the function description to select an appearance description of a first appearance to be presented by the user interface;
- associate the function description and the appearance description on the fly at run time;
- and
- execute the user interface with the associated function and appearance.

22. (Currently Amended) The computer-readable medium of claim 21, further comprising instructions to replace the function description during program execution while providing a continuity of presentation.

23. (Currently Amended) The computer-readable medium of claim 21, further comprising instructions to replace the appearance description during program execution to present logic of the user interface with a different appearance.

24. (Previously Presented) The computer-readable medium of claim 21, further comprising instructions to:

- read a map defining multiple functions to be provided by the user interface including the first function;
- read a fashion defining all appearances to be presented by the user interface including the first appearance;
- associate the map and the fashion on the fly at run time; and

Attorney's Docket No.: 07844-280001 / P254

executing the user interface with the associated map and fashion.

25. (Previously Presented) The computer-readable medium of claim 24, further comprising instructions to replace the map during program execution.

26. (Previously Presented) The computer-readable medium of claim 24, further comprising instructions to replace the fashion during program execution.

27. (Previously Presented) The computer-readable medium of claim 24, wherein the map specifies that a subordinate part of the user interface is specified by a second map-fashion pair.

28. (Previously Presented) The computer-readable medium of claim 24, further comprising instructions to receive events from one of the map and the fashion.

29. (Original) The computer-readable medium of claim 28, further comprising instructions to execute business logic associated with the respective component.

30. (Canceled)

31. (Currently Amended) A computer-readable medium of defining a user interface for a computer program, comprising instructions to:

select at least one of a map component and a fashion component according to an environment variable on the fly at run time;

associate the [[a]] map component and the [[a]] fashion component ~~on the fly at run time~~ to generate the user interface, the map component including logic for changing one of the map component and the fashion component; and

execute the user interface with the associated map component and fashion component.
